Syed Israr Ahmad

Senior Odoo Consultant & Developer | ERP Project Manager | Remote Ready | Custom Module Development | API Integration
Lahore, Punjab, Pakistan

Summary

With 4+ years of hands-on experience in Odoo ERP implementation, custom module development, and end-to-end project delivery, I help businesses streamline their operations through smart ERP solutions and digital transformation.

I specialize in Odoo Techno-Functional consulting — bridging the gap between business requirements and technical execution. From requirements gathering and system architecture to deployment and post-go-live support, I manage the full project lifecycle with precision and a strong focus on business impact.

Beyond Odoo, I have extensive experience working on local and custom-built ERP systems, HRM platforms, and POS solutions — giving me a broader perspective on how businesses operate and what they truly need from their systems.

Technical Expertise:

Odoo 17 | Odoo 18 | Odoo 19 | Custom Module Development | API Integration & Third-Party Connectors | Python | XML | WooCommerce Integration | POS | HRM | CRM | Inventory | Purchase | Accounting Modules | Local ERP Systems

Project Management:

Agile & Scrum Methodology | Full Project Lifecycle Management | Cross-Functional Team Leadership | Sprint Planning | Stakeholder Communication | Risk Mitigation | Resource Planning | On-Time Delivery | Requirement Gathering | UAT & QA Coordination

Additional Background:

PHP | Laravel | WordPress | Shopify — enabling seamless ERP-to-web integration across diverse project environments.

What I Bring:

I have successfully led ERP implementations, managed development teams, and delivered projects that align technology with real business outcomes. Whether it is a full Odoo implementation, a custom module, an API integration, or a complex multi-team project — I bring both the technical depth and the project management discipline to get it done right.
